Question No: 473

(i) Are the Government aware of the fact that the people of Channapatna town are experiencing great difficulties with regard to drinking water facilities ?

(ii) Will the Government be pleased to state how far the well boring operations conducted by the well boring expert under the directions of the municipality have been successful ?

(iii) Are the Government aware that these operations have been stopped ?

(iv) Will the Government be pleased to state why it was stopped ?

(v) If the answer to (ii) be in the negative, will not the Government think that it is immediately necessary to work out a proper and permanent scheme of water supply to the long suffering town ?

Inte n lation n r J Ven ata na

With refer n to th above I have th honour to st t that t the scarcity of drinking water in Chennapatna town was very seriously felt and various schemes such as boring wells in the Kanva river - tank or Kudinerukatte tank bed below Kudinerukatte tank oser in Kaiwara and were feeding Kudinerukatte from Arkavati river t our cost of The Water Supply Executive Engineer inspected the town and gave an estimate of 2000/- and odd for investigating the yield of water in the bed of and below Kudinerukatte and feeding the said tank from Arkavathi (Closepet river) This estimate for sinking investigation was considered too costly for this Municipality and was stopped

The Deputy Commissioner Mr Hegde further suggested that the Municipality may investigate the yield of water in various places in the town by means of well boring machine with Director of Industries and Commerce in the attempt and a well boring machine is got first bore hole was in the tank bed It was sunk about 70 feet and there was about 62 feet of water Power pump could not exhaust the well even after 1 nt hours work and the yield of water was 60 gallons per minute below 70 feet, it was hard rocky bed and this boring machine could not easily bore below machine was shifted to below the tank bed the result was almost similar

The Industrial Commissioner advised to observe for some more days to collect - estimate of water supply in the various boreholes so that the Government may issue orders for the Industrial and Water supply solution to the water scarcity in the town of 1000/- was derived out to investigate boreholes in Municipality may spend 1000/- and odd and the Municipality may submit for sanction to the Government for the Municipality and so in the meantime as part it was decided to stop the further boring activities in all stopped

Unless the Government come to the rescue of the Municipality, they will be left with no other alternative but to go on with the boring activities

The municipality have spent so far about a lac/- and if the Government kindly sanction a like amount and dig tube holes one in Gendamodu and another on the river bank (both the places have been inspected by the Industrial Engineer) some definite scheme can be formed
